

INEEL TRU Baseline Disposition Map

PREDECISIONAL DRAFT

This map is conceptual and in many cases does not represent cleanup or transfer decisions; this map does not preclude the ongoing regulatory and stakeholder decision-making processes.

Notes:

- All volume estimates are rounded to the nearest whole number.
- Reference: Inventory Analysis of Stored Transuranic (TRU) Waste at the Radioactive Management Complex (RWMC), K.M. Croft and V.S. Scown, INEL-96/0308, November 1996.
- The source document estimates the CH inventory as 64,764m³ and the RH inventory as 89.6m³. The CH inventory cited in the reference includes a derived value for early waste receipts for which container-specific data does not exist, plus an estimated 40m³ of RH waste stored and managed as CH waste (i.e., waste stored in shielded drums).
- *4. Input stream AC reflects INEEL MLLW anticipated to go to AMWTP however, actual acceptability by AMWTP for treatment has not yet been determined. Therefore, disposition profile for stream has not yet been determined or included in AMWTP volumes.
